

You're Always Aware and In Control

No matter where you are, Alarm.com keeps you close to your home or business. Alarm.com gives you the ability to monitor the status of every sensor in your security system, in real-time, through the Internet.

View system status and recent events at www.alarm.com

The screenshot shows the Alarm.com web interface. At the top, it says "You are logged in as Jane to Smith's Home." Below that are tabs for Security, History, Automation, Notifications, People, and Profile. The "Security" tab is active, showing a "System Summary" with sections for "STATUS" and "LAST 15 EVENTS".

STATUS: System is disarmed. Garage Door is open. Front Door is open. Kids Room Motion is activated. Change system state: Disarm [set].

LAST 15 EVENTS: - Front Door Opened, at 10:45 am, 3 Jun 04
- Garage Door Opened, at 9:28 am, 3 Jun 04
- Kids Room Motion Activated, at 8:30 am, 3 Jun 04
- System Disarmed by Jane Smith, at 8:10 am, 3 Jun 04
- Kids Room Motion Idle, at 11:05 pm, 2 Jun 04

Callouts in the image highlight the "STATUS" section and the "LAST 15 EVENTS" list, with arrows pointing to a larger, clearer view of the same information below the screenshot.

Monitor activity in your home or business from anywhere through the Internet.

100% Wireless - No Phone Line Required

ALARM.COM
THE WAY SECURITY SHOULD BE

Interactive Security Systems
for Homes and Businesses

Why Alarm.com

Other Security Systems	Alarm.com
Incomplete Protection	Total Protection. Most injuries that occur in the home are not caused by intruders. Kids are more likely to be injured by accidentally ingesting medicine, alcohol, or cleaners, or as a result of a swimming pool accident. Alarm.com helps you monitor activity in hazardous areas of your home.
Seldom Used	Useful Everyday. Traditional systems are only used for security, and are often used only when people go out of town. Alarm.com provides value everyday, keeping you aware of everything that happens, not just alarms.
Difficult to Use	User Friendly. Alarm.com's website is easy to use. If you can browse the Web, you'll have no trouble using your Alarm.com system.
Vulnerable to Phone Line Cut	More Secure. Alarm.com systems do not use a phone line to report alarms.
Require a Landline Phone Connection	Wireless. Thinking of changing your home phone service to voice-over-IP or using your cell phone exclusively? Alarm.com is 100% wireless and does not require a local phone connection.

How Alarm.com Works

Your system sensors send signals to your control panel whenever they detect activity. Your control panel processes the signals and transmits information to Alarm.com using a nationwide wireless network.

You can see your system's activity and control your system through the Alarm.com website. Real-time phone, e-mail, and text-message notifications let you know what's happening when you're not there.

No PC or Internet connection is required at the location where your Alarm.com system is installed.

Sample E-Mail Notification

To: Smith, Steve
Subject: The LIQUOR CABINET was opened at 1:15 PM

The Smith Home at 123 Garden Street: The LIQUOR CABINET was opened at 1:15 PM on Friday, October 8 2004.

This is a monitoring message from Alarm.com. To learn more about this event or control your system, log into <https://www.alarm.com>

Thank you for using Alarm.com, the next generation security system for your home or business.
