

Maintaining Your investment

Maintaining your investment is important to SMS. Whether you have a security system, card access, camera system or fire alarm, annual preventive maintenance is essential in ensuring a properly working system that's ready to respond when you need it most. The cleaning of smoke detectors, load testing standby batteries and checking all system components ensures a properly working system. Think of your system as a car; if you don't put oil in the car or maintain it properly it will not function when needed. We have several plans available for our Residential and Commercial clients.

Contact our office for options and pricing plans available for your specific needs.

Residential

Residential Worry-Free Warranty Program

To avoid false alarms and ensure trouble-free operation of your residential security/fire alarm, SMS security offers a worry-free warranty program. After your original one (1) year warranty expires, you should consider investing in your system.

Here's what the program includes:

- Annual system cleaning, inspection and battery check
- Free replacement of any low and/or out-of-date batteries
- All parts and labor charges throughout the year on any system maintenance
- Priority service scheduling
- Access to our 24-hour technical phone support hotline
- Free system remote programming (applies to GE, NAPCO & Bosch products)
- 10% discount on any new installation work or system additions
- Free system software upgrades as they become available

All this for a low monthly fee

Fire Inspections

Fire Alarm Inspections

Our Fire Alarm Inspections Division inspects, maintains and tests automatic fire alarm systems. SMS field technicians are certified by the NTS National Burglar and Fire Associations training program and have completed training by the National Fire Protection Association (NFPA). All inspections performed are based on NFPA 72 (the National Fire Alarm Code) guidelines.

Inspections include:

- Test and cleaning of all system smoke detectors
- Test of heat detectors and pull stations
- Test of horn/strobes
- Central station test and account call list update
- Control panel and standby battery load test
- Sprinkler water flow and tamper switch test
- NFPA 72 report posted at panel with copy issued to customer
